

The following errors have been found in the Fall 2015 edition of Discrete Mathematics: An Open Introduction. These will all be fixed in the next edition. If you find a typo or a passage that is unclear, please contact me at `oscar.levin@unco.edu`.

Chapter 1

- Exercise 1.1.4: The question is ambiguous and the supplied answer is wrong anyway. A better phrasing of the question would be the following. “For the rest of your outfit, you have 5 shirts, 4 skirts, 3 pants, and 7 dresses. You want to select either a shirt to wear with a skirt or pants, or just a dress. How many outfits do you have to choose from?” The answer should be $5 \cdot (4 + 3) + 7 = 42$.
